

Yucca

Yuccca Schidigera Extract

Non-ionic surfactant spreader and activator

Features and benefits

Yucca is a rich source of steroidal saponins, whose extract acts as a natural surfactant or wetting agent. Surfactants work to reduce surface tension between water particles, which facilitates spreading. It also enables water to spread evenly through soil, reducing the presence of dry spots and water channels.

Yucca can be added to fertilizers to increase their effectiveness and ass additional protection against drought, heat, salt and UV stress. Conserve water, increase productivity and protect against dehydration by adding Yucca to your fertilizer.
