INSTRUCTIONS

Shake or stir well before use. Where higher water rates are required for good foliar coverage, do not exceed maximum product rate per hectare. Sensitive foliage or plants should be test sprayed prior to full scale application.

Frequencies are a guideline only and can be adjusted according to farm practices and/or in conjunction with crop monitoring. Ensure suitable spray conditions (e.g. temperature, humidity, wind-speed), prior to foliar application.

Compatibility and/or performance cannot be guaranteed when combined with other products. Jar test for compatibility and spray test on small area before wide-spread use.

IMPORTANT

Warning: This fertiliser contains biuret, maximum 0.18%. Repeated foliar sprays may cause damage to citrus. For citrus use Citrus-Tech Triple Ten™.

Avoid spraying close to harvest if produce is susceptible to staining.

Not compatible with soluble calcium based inputs.

Do not foliar spray until seedlings are 15 cm high.

Note: Product in 1000 L tanks may weigh over 1 tonne. Forklift with 2 tonne lifting capacity is recommended.

Note: Our Triple Ten™ formulation is identical for all crop specific products (with the exception of Citrus-Tech Triple Ten™). The individual labels relate to different application rates and timings that are critical to the success of the product.

STORAGE & HANDLING

Store in a cool dry area out of direct sunlight. This product has been tested to store safely down to 5°C. Crystallisation or sedimentation may occur below 5°C. Do not pre-mix or store in diluted form. Seal lid/cap immediately after use.
